

Introduction

The biodiversity team undertook a wide range of studies, embracing national and international developments and areas of debate, in addition to the examination of existing legislation and the intentions, plans and projects of local and national bodies which might impact upon the Parish of Dickleburgh & Rushall.

A broad examination of ancient maps was made and comparisons made with the contemporary landscape following extensive surveys of the naturally occurring features within the Parish boundary.

The '*Have Your Say*' open days and questionnaires highlighted the importance placed on wildlife by residents and we followed up on the anecdotal reference to certain features by capturing actual data from old, recent and new wildlife surveys. Surveys were conducted by local enthusiasts and volunteers, conservationists, and the team itself.

Bat surveys were completed and continue using the Parish's own Bat monitor, working in conjunction with the British Trust for Ornithology in Thetford.

It is intended that this survey work will be ongoing. A permanent Biodiversity Body is planned, and this will dovetail with the existing Commons Committee working with local and national wildlife bodies. A website is planned so that all existing and new data, surveys and so on are made permanently available to the public.

This document illustrates some of the survey data conducted, features extracts from certain publications and makes reference to a cross-section of the study materials used in the preparation of the Plan.

Dickleburgh Wild Birds 2000-2001

Held in archive is Andrew Piersenne's book from 2004 detailing the birds of the Parish in 2000 and 2001 in which he details bird sightings from the late 1800's. It provides a unique perspective of the birds species in decline since that period in addition to notes on species which have a more established presence in recent times. In conjunction with recent and ongoing surveys it allows the study of changes in bird population types across 140 years from the 1880's.

Dickleburgh's Wild Birds 2000-2001

Records of birds observed in our parish in recent years by local residents, compared with notes from Charles Candler's list of Birds of Harleston and District, published in 1888

May 2004*

Held in archive is a collection of data from NBIS, largely from 2015 and 2016 but also from the 1980's onwards. The full collection records extensive sightings of amphibians, reptiles, birds, mammals, moths, butterflies, crustaceans, moss, plant-life and a wide range of insects.
